Customer's feedback (change requests):

Sehr geehrter Herr Koch, sehr geehrter Herr Lindner,

vielen Dank für die Übersendung der Lok. Folgendes ist noch zu korrigieren:

- ein kurzer Sprung im Sound beim Übergang "Start auf Standgeräusch" und "Standgeräusch zum Abschaltvorgang";
- der Abschaltvorgang wird abgebrochen;
- im AC-Analog-Modus reagiert nur das Licht, die Lok fährt aber nicht.

Den Motorsound insgesamt etwas "voller" machen, d.h. die niedrigen Frequenzen (soweit man hier davon sprechen kann) um ca. 2-3 dB mit einer breiten Glocke anheben. So bekommen wir etwas Gegengewicht schrillen Generatorgeräusch.

Bitte um eine korrigierte Version.

Mit freundlichen Grüßen
Christian Bauer

Changes in comparison to the former version:

lower frequencies amplified up to 5dB, high frequencies lowered about 3dB
